

Softwire

Graduate Consultant Software Engineer

About the Role

Softwire is hiring approximately 50 Graduate Consultant Software Engineers for 2027. This permanent role blends software engineering expertise with client advisory responsibilities, focusing on strategic problem-solving and AI-driven solutions.

Positions are available across London, Cambridge, and Manchester (minimum 3 days per week in office or on client site). Salary is £45,000 base plus £2,250-£3,000 average profit share. Start dates: March, June, September, and November 2027.

Training Structure

- **Month 1 - Software Engineering Induction:** Full-time training covering coding fundamentals, source control, modern technology stacks, and AI-assisted development. Trainees form teams to develop commercial-grade software, typically for nonprofits or internal use.
- **Months 2-15 - Client Projects:** Team-based project delivery with continuous support and peer review. Concurrent part-time training spanning six weeks covers system design, development methodologies, and additional technologies. Focus shifts toward architectural oversight and strategic partnership as AI handles routine coding.
- **Month 16+ - Career Progression:** Opportunities across technical leadership, consulting, delivery management, or specialisations in design, data science, and AI.

Candidate Criteria

Open to graduates, soon-to-be graduates, or those without a degree who are already proficient coders. No particular academic grades are required - all offers are unconditional.

Problem-solving passion

You get a buzz from building things that make a difference to businesses, people and society, and have a genuine passion for coding.

Consultancy mindset

You are genuinely excited about working with customers to solve their problems. Comfortable in new environments, quickly building relationships with new clients, and confident discussing technical ideas with people with varying degrees of digital literacy.

Team collaboration

You love pushing the team to greater heights by helping colleagues out wherever you can, with a focus on self-improvement and a default answer to a question of "yes."

Technical aptitude

Exceptional logical analysis and reasoning capabilities.

Benefits

- 25 days annual holiday (with buy/sell options)
- Generous parental leave
- Free gym and subsidised restaurant (London)
- Annual company holiday
- Skilled Worker visa and ILR costs covered for non-UK nationals

Application Process

- Application form submission
- Online tests (~2 hours)
- 30-minute non-technical interview
- 90-minute technical interview
- 45-minute soft skills interview
- Group assessment day in-office

Softwire aims to respond within two working days at each stage. Applicants are advised to practice coding using CodeSignal, HackerRank, or LeetCode - a minimum of around 25 hours of coding experience is recommended before assessment. Recommended languages: Python, Ruby, JavaScript, Java, or C#.
