Experience Level: Graduate

Type: Full Time

Job description

Why Software Engineering in Tax?

Technology is transforming the way tax is managed. Businesses are working with larger volumes of data, responding to changing regulations and looking for smarter ways to solve

complex challenges. That's why technology has become an increasingly important part of the tax world.

In our Tax Technology & Innovation team, we build the products and platforms that help organisations manage tax more efficiently and make better decisions. From developing new digital tools to improving existing technology, our work helps clients simplify processes, reduce manual effort and access the insights they need.

As a Software Engineering in Tax graduate, you'll help create technology that solves real problems for businesses. Working at the intersection of software engineering, data and tax, you'll contribute to products that are used by organisations across the UK and around the world.

Life as a Software Engineering in Tax graduate

As part of our Tax Technology & Innovation team, you'll work with software engineers, analysts, designers and product specialists to develop and improve digital products that help organisations manage tax more effectively.

You don't need to be a technical expert before you join. We're looking for people who are curious, adaptable and excited by solving problems. What matters most is your willingness to learn, ask questions and explore new ideas.

You could be helping to build new features for a cloud-based application, testing software before release, automating manual processes or using AI-powered tools to improve the way technology is developed. As you gain experience, you'll learn how ideas move from concept to finished product and see first-hand how technology can make work simpler, faster and more effective.

Throughout the programme, you'll gain exposure to the full software engineering lifecycle. That means learning how products are shaped and designed around user needs, how software is built and tested, and how new features are deployed and improved over time. Working in collaborative teams, you'll build practical experience of modern engineering approaches while developing your coding, problem-solving and technical design skills.

Your future

Throughout the programme, you'll develop valuable technical skills through technology-focused training, structured learning and hands-on project work. You'll be supported by a network of peers, mentors and leaders who are invested in helping you learn and grow.

Over time, you'll build the knowledge and confidence to take on increasingly complex engineering challenges. As your skills develop, you'll have the opportunity to explore areas that match your interests, whether that's software engineering, data, cloud technologies, automation or product development. Whatever path you take, you'll have a strong foundation for a varied and rewarding long-term career in technology.

Capability:

Technology & Engineering

Programme Length:

3 years

Qualifications:

Technology-focused learning and training

Entry Requirements:

At KPMG, everyone brings a unique perspective, and we want to ensure that you have the best opportunity to demonstrate your potential. We've designed our application process to assess everyone's potential and to ensure that you have the skills to succeed at KPMG.

We will be considering your strengths and achievements alongside several other metrics, including technical background and/or experience. You'll generally be expected to demonstrate the following:

- 2:2 undergraduate degree in any discipline.

You'll also have the opportunity to provide additional information for us to assess your application and potential in the context of your socio-economic background and/or any extenuating circumstances, which may have a positive uplift on your academic achievements through contextual recruitment. You can find out more [here](#).

Key Skills:

Throughout the recruitment process we will be looking to learn more about your strengths.

To be successful on this programme, you will be required to demonstrate the strengths that we look for in our apprentices at KPMG.

Learn more about what we look for and how to apply [here](#).

Training and Development:

The training and development of our people is critical to the future success of our business. We want to empower you to grow in your own way, to feed your curiosity and embrace a growth mindset in an environment where learning is continuous. Therefore, we have created a rich curriculum and learning community to help you build your skills and fulfil your potential. This ranges from an immersive induction experience to help you transition to the world of work, formal training courses, leadership knowledge bites, learning journals, online courses and networking events – all aligned to our 'learn for a lifetime' strategy designed to help you gain an advantage for life.

On this programme, you'll also have the opportunity to take part in relevant technology-focused learning and training

Why Technology & Engineering at KPMG?

Technology is at the heart of what we do and part of the very DNA of our business. Our tech teams have the access, capability and connectivity to make possibilities happen, blending tech and business expertise to solve complex problems that help our clients and communities to thrive. We've invested in a team of over 2,000 technologists; creating a step change in the way we work. Delivering broader, deeper expertise to our clients faster than ever. Our connected solutions stretch across a range of specialisms. From tech strategy, risk management and data & analytics, through to software engineering, cyber automation, powered applications and cloud transformation.
